About the Arab Federation of Exchanges (AFE)

Arab Federation of Exchanges
اتحاد البورصات العربية

The Arab Federation of Exchanges (AFE) was established in June 1978 by the League of Arab States.

The Arab Federation of Exchanges is the official Regional Federation representing the Arab Exchanges and works in close cooperation with the World Federation of Exchanges (WFE) and the Federation of Euro-Asian Stock Exchanges (FEAS).

The Mission of the Arab Federation of Exchanges is to create a transparent and developed environment for the Arab Capital Markets, to reduce the barriers of securities trading across the countries, to enhance the communication among its members and to coordinate their activities with the Regional and International partners.

The Headquarter of the Arab Federation of Exchanges is located in Beirut, Lebanon.

Mr. Nader Azar, the Chief Executive Officer of the Amman Stock Exchange is the Chairman of the AFE for the current exercise.

Dr. Fadi Khalaf is the Secretary General of the AFE, former President of the Beirut Stock Exchange.

The AFE issues quarterly and annual reports along with studies and surveys reflecting the official figures of its members and published on the AFE website and disseminated through regional and international financial platforms.

The AFE regroups the 18 Arab Regulated Exchanges, 4 Clearing Settlement and Depository Companies (CSDs) and several Financial Services Institutions as Affiliated Members covering the GCC, Levant and North Africa regions.

Members of the Arab Federation of Exchanges:

I - Exchanges

II - Clearing Settlement & Depository Companies (CSDs)

III - Affiliated Members (Financial Services Institutions)

STUDY:

Reasons behind the Lack of Liquidity on the Arab Financial Markets

Since a while, analysts have been racing to define the reasons lying behind the lack of liquidity on the Arab Markets and they're still struggling to reach an answer.

Whenever the Arab Markets rose, their turnover velocity exceeded for some Exchanges the global liquidity ratios. On the other hand, whenever their prices dropped or stabilized, their liquidity fell-off to the third or even below.

I've been drowned by confusion while hearing analysts explaining the lack of liquidity through the following reasons; some have attributed it to the summer vacation or to the Ramadan fasting period. Others referred the reasons to the anticipation of the Fed rate hike decision, to the European crisis, to the China Slowdown and even to the geopolitical situation in our Arab region. Many have also blamed the absence of Market-Makers, the lack of investors education, and many other legitimate reasons, yet not sufficient enough to persuade me.

As one of the observers, I've wondered: Why the above factors weren't fully applicable during the years 2012, 2013 and 2014?

The above causes weren't valid back then. Summer vacations didn't affect traders, our region has never been clear of geopolitical crisis, and Market Making has never reached an optimum. Despite all that, everyone was caught up monitoring the prices on screens and trading actively.

As I'm not persuaded by generalities, I will be treating some of the reasons mentioned above and their implications on the liquidity Markets fluctuations.

First: The Education of the Arab Investor and the One-Way Market Trend

I get confused while hearing that the main defect in our Markets is due to the lack of investor education, leading to the One-Way Market. This reason might be true, but the question is: how can the Arab investor follow the International Markets fluctuation anticipating their impact on the Arab Markets, but once it comes to the Arab Markets we accuse him of lack of knowledge and education?

In every Market there are experts and newcomers. Yet, Arab Markets might suffer more than others from the effects of the so-called One-Way Market; still let's not blame the investor education. It is mainly due to other factors that we might have chosen to overlook.

Second: Market-Making

Market-Making plays an essential role in enhancing liquidity which I can summarize with this parable: Imagine with me people screaming for two lifeguards by the shore while watching a man drowning into a rough sea, unfortunately both lifeguards are unequipped with the necessary tools to save a life. One of the lifeguards, driven by his impulsivity, jumped into the water and was able to reach the man in struggle. As for the second lifeguard, his rational thinking kept him on the shore watching with the rest of the people as he doesn't have the safety kit. Meanwhile, it took very few minutes to watch the impulsive lifeguard and the man in struggle both drowning into the water. However, the society never stopped criticizing the lifeguard who stood by the shore instead of fulfilling his duty.

The moral of the story: do not push the Market-Maker to jump into a rough sea unequipped; it will result in drowning himself along with the investor. Provide him with the right tools then judge the result, knowing that the Market-Maker is a profit organization; it isn't a charity sacrificing its funds and time to save drowning investors. Without the right tools, we will be waiting an eternity for Market-Makers to jump into the wa-

Third: The Three Phases of a Price Cycle and its Techniques

The hectic fluctuation in the Arab markets liquidity is essentially due to both technical and legislative reasons. As known, the three phases of a Stock Market cycle are: Up-trend move, Correction and Horizontal Consolidation. Most of technicians agree that any market spend the third of its cycle in a Trend phase and the remaining two thirds between Correction and Horizontal Consolidation.

Up-trend Phase:

Usually, all players on the Market try to follow the trend putting their entire liquidity in. In this phase; most of them realize profits as it is not a zero sum game Market like the Forex Market. All traders, investors, stock exchanges, CSDs, CMAs and brokers feel at ease during this phase. It is normal that at the end of this up-trend move, the Market becomes saturated and technically overbought. How the market players react normally in such situation? In case they have the possibility of protecting their positions with hedging tools, they might keep some of their positions looking for the trend to resume after a while. But in case of the absence of any derivatives or other hedging instruments, most of the professionals will withdraw from the Market at a time, pushing for an edgy reversal and initiating a sharp correction.

This phenomenon can be smoothed if the hedging tools are available on the market as some of the players might keep their protected position in the Market for a while, softening the reversal. This explains in a way the sharp variation in the liquidity on the Arab Markets in absence of derivatives.

Correction and Consolidation Phases:

Same principle applies during the correction and consolidation phases when the possibility of protecting the positions is completely absent:

Players will prefer to stay out of the Market until the first signs of the recovery are confirmed. Meanwhile they'll refrain from taking the risk by investing any unprotected liquidity in the Market.

Those holding high leveraged positions will be forced to sell due to the margin calls if they are not able to hedge their positions even if they are convinced that the Market will be recovering shortly. This will put high selling pressures on the Market, maybe bringing short-term liquidity for the Market which is not the one really needed at this point.

Those who bought at the top, without the derivatives they will find themselves prisoners of their losses restraining from taking any action. This is where we will hear even short term traders talking about becoming long term investors, even sometimes planning to inherit their stocks to their children.

In the all above mentioned cases, it is clear that the absence of the derivatives and other hedging tools like ETFs is a crucial reason behind the lack of liquidity during those phases. Talking about ETFs, it might look weird considering them as a hedging tool, still during the corrections considerable part of the long term investors tend to shift their investments from individual stocks to ETFs, first because ETFs cannot get bankrupt, and second because of the diversification offered usually by funds.

Fourth: The Importance of Short-Selling in Increasing the Liquidity Level

The most important question remains: If derivatives and ETFs are so important for the Arab Markets, why those instruments do still almost not exist on our Markets?

Several trials to list ETFs and few other financial instruments took place on the Arab Markets since the year 2006, without noticeable success. Some ETFs issuers feel trapped in their initiative and they are even trying to find a way to withdraw their ETFs from the Market due to the lack of liquidity making them unprofitable for the company.

The reasons behind all failures on this level were the absence of the shorting and securities lending possibilities on those Markets due mainly to two factors:

Religious reasons: The fact that the Islamic Sharia doesn't allow selling what we don't own, several explanations and efforts are now in-course to find a Sharia compliant financial instruments and tools that can offer to the Markets the flexibility needed. By observing the progression of those efforts, we have positive hopes to see such instruments in place in the coming two years.

Regulatory reasons: The Capital Market Authorities are mostly afraid of seeing an increase in selling pressures during corrections and crisis created by the short selling if authorized. The Capital Market Authorities are by nature risk averters, which is completely understandable in short-selling case. Still by comparing the

Reasons behind the Lack of Liquidity on the Arab Financial Markets

The short-selling can challenge the Market with an excess temporary drop during the down moves. Still, this selling will provide to the Market the necessary velocity needed for a sharp bounce up in a V shape pattern, which is normally originated by the short covering process. Knowing that allowing the short-selling means automatically encouraging the hedging tools, which will soften in counter-part the negative effects of the margin calls selling.

Fifth: Are we Really Protecting our Markets by Banning Short-Selling?

The controversial of short-selling will never end. The best way to reach a conclusion about this important issue is to compare the Arab Markets indices historical charts with the International Markets, specifically the American Markets where shorting and derivatives are allowed. Observers can immediately deduct that the Arab Markets weren't enough protected and didn't recover as much as the American Markets since 2008. With or without shorting and derivatives, we were always affected by international and regional crisis as much as other Markets and sometimes even longer.

كلمة أمين عام إتحاد البورصات العربية الدكتور فادي خليل

دراسة عن أسباب شح السيولة في أسواق المال العربية

يشتكون من الشح في السيولة ويتسابقون على تحليل المعضلة فيضعون بين الأقلام والمذيع والشاشات. يستضيفون المحظيين لتشخيص المرض، عله إذا علم السبب بطل العجب.

فما السبب يا ترى؟ أسواق إذا ما ارتفعت، تجاوزت سيولتها ومعدل دوران أسهامها معدل السيولة العالمية. أما إذا ما إنخفضت أسعارها أو استوت أفقاً، هبطت سيولتها إلى الثلث وما دون. سمعتُ الكثير من التحاليل وقرأتُ منها حتى شح نظري، فإذا بالتحليل يأتي إما من باب العطلة الصيفية أو من باب ولوغ الشهر الفضيل، أحياناً بسبب الترقب لقرار المركزي الأميركي أو الأزمة الأوروبية أو الصينية، وأحياناً أخرى بسبب الوضع الجيوسياسي في المنطقة أو ربما لغياب صناعة السوق أم ثقافة المستثمر وغيرها من الأسباب المشروعة ولكن الغير كافية، والتي والله لم تشفي غليلي يوماً.

كما يحقّ لكل مراقب أن يتساءل، تساءلتُ من جهتي، لماذا لم تفعل هذه العوامل فعلها خلال الأعوام الثلاث 2013، 2014؟

ضرَّت السيولة عرض الحائط بكلفة المسببات المذكورة أعلاه، فلا الإجازات أثنت المتعاملين عن التداول ولا الأزمات الجيوسياسية فارقت منطقتنا يوماً ولا صناعة السوق كانت في أوج مجدها، وبالرغم من كل ذلك، في تلك المرحلة، كان الجميع مشدوداً إلى شاشات الأسعار يتربّص ويتداول بنشاط وبزخم.

غالباً ما تستفزني التحاليل الشمولية فاسمحوا لي إذاً أن أتناول بعضًا من الأسباب المذكورة أعلاه وغيرها من الأسباب، محاولاً إعطاء كل منها حقه وحجمه كما ومسؤوليته عن التقلبات في سيولة أسواق المال العربية.

أولاً: في ثقافة المستثمر العربي وسوق الاتجاه الواحد

تحيرني أراء وقد لمَعَت عيناً مطليقيها فجزموا بأن الخلل الأساس في أسواقنا هو أننا في سوق الاتجاه الواحد وقد شبّهوه وللأسف بسوق القطبي وبتدنى مستوى الثقافة المالية لدى المتداولين في أسواقنا العربية. لهؤلاء أقول كفى إفراء، ففي كل سوق هناك متقدون وهنالك مبتدئون. ولهم أسأل كيف تفسرون أن المستثمر العربي يصبح خيراً إذا ما بدأ بمجادلتكم بتقلبات الأسواق العالمية متربّقاً تأثيراتها على الأسواق العربية ومن ثم تصفوه بقلة الدرأية وتحملونه وزر الأسواق ذات الاتجاه الواحد.

نعم ما زالت تقصنا الكثیر من الثقافة ولكن ليس هذا هو السبب الأساس لجفاف السيولة. نعم نعاني أكثر من آثار ما يُسمى بسوق الاتجاه الواحد لكن السبب لا يعود إلى ثقافة المستثمر إنما لعوامل أخرى أشُحنا بنظرنا عنها عمداً أو لنفل سهواً للتativif.

السؤال الأهم هو إن كان ضعف ثقافة المستثمر العربي هو أحد أسباب شح السيولة بحسب البعض، فماذا إذاً عن المستثمر الأجنبي والذي فتحنا له أبوابنا منذ حين ولا يزال متربّداً في ضخ سيولته في أسواقنا. هل سنتمهم أيضاً بقلة الدرأية وضعف الثقافة؟

ثانياً: صناعة السوق وأدواتها

لصناعة السوق دوراً جوهرياً في تحفيذ السيولة ولكن عندما أكتب عنها يحضرني هذا المثل: كان أحدهم يختبئ في مياه البحر يصارع الأمواج فيصرخ الجميع مستجددين بمنقادين إثنين يقونان بمراقبة الشاطئ. للأسف كانوا كلاهما يفتقدان للأدوات اللازمة للإنقاذ، كإطار الإنقاذ وغيره من الأدوات الضرورية للإستعانة بها إذا ما ارتفعت الأمواج العاتية. أحدهما لبى النداء أمّا الثاني فإعترض بعد أن أخذ في الحسبان ضراوة الموج وقلة العتاد. من أخذته النخوة راح يصارع الأمواج حتى وصل إلى الرجل المتختبّ وحاول إنقاذه ولكن وبسبب قلة العتاد غرق الإثنان معاً. أما من بقي على

المؤسسة أدوات الأمان الازمة ومقومات الربحية الكافية فإنكم ولا شك ستنتظرونها طويلاً. حتى لو حاولت بعض المؤسسات المالية بمبادرة منها لعب دور المنفذ بدون أدوات فستعود وتتسحب عند أول عاصفة تضرب الأسواق.

ثالثاً: المراحل الثلاث في دورة الأسعار وتقنياتها

إن التقلبات في مستويات السيولة في المنطقة العربية بنسب تتجاوز تقلبات السيولة على الأسواق العالمية مردها إلى أسباب تقنية وتشريعية في آن معاً.

تنقسم الحركة على أسواق الأسهم تقنياً وبشكل عام إلى ثلاثة مراحل؛ مرحلة الإرتفاع، مرحلة التصحيح ومرحلة التقلبات الأفقية. وينتفق التقنيون بمعظمهم على أن السوق يمضي ثلث دورته في فترة الإرتفاع فيما يمضي الثالثين المتبقين في مرحلة التصحيح والتقلبات الأفقية.

مرحلة الإرتفاع:

يقبل المتعاملون بكافة فئاتهم على ركوب موجة الإرتفاع حيث حظوظ الربح تكون مرتفعة جداً وحيث يخال كلّ منهم أنه يملك سر الربحية على الأسواق. في هذه المرحلة تفيض السيولة في الأسواق ونرى الإبتسامة العريضة تعلو وجوه البورصات والهيئات وشركات الوساطة، كما وكافة الجهات الأخرى المعنية بالأسواق. في نهاية هذه المرحلة تظهر علامات المغارات والتشبع للعاملين بأساسيات وبنفيات السوق. فإذا توفرت أدوات التحوط بقي البعض منهم في السوق على أمل إستمرار الإرتفاع ولكن بعد التحسن وراء أدوات التحوط إذا أتيحت، فيما ينسحب الآخرون محققين أرباحهم. إما في حال عدم توفر أدوات التحوط فينسحب العارفون دفعة واحدة محققين أرباحهم، متخففين من مواجهة حركة التصحيح المتوقعة وهم عزّل من أي سلاح للدفاع عن النفس. من هنا نرى سرعة إنقلاب هذه الأسواق من مرحلة الإرتفاع إلى مرحلة التصحيح بنسب تفوق تلك التي نراها عادة في الأسواق التي تتمتع بأدوات التحوط. بعدها تتفاقم حركة البيع والإنسحاب من السوق وهذا مبدأ تشتراك فيه الأسواق بكافة أنواعها، عالمية وإقليمية بدون إثناء.

مرحلة التصحيح والمراوحة الأفقية:

إن هبوط الأسواق وإن كان حاداً يمر بمراحل عدّة قبل ملامسته الواقع حيث يمرّ بفتراتٍ من التردد من قبل المتعاملين وهنا تكمن أسباب جفاف السيولة في بعض الأسواق دون سواها. كيف ينقسم المتداولون في فترات الإنخفاض وما هي مسببات جفاف السيولة:

من المتعاملين من يعتقد بأن الواقع أصبح وشيكاً فيشتري الأسهم ويتحوط بواسطة المشتقات إذا توفرت ولكنه قد يحجم في حال عدم توفرها، مما يقصّ نسب السيولة.

منهم من إشترى بواسطة الهامش في مرحلة الإرتفاع متجاوزاً إمكاناته، فيجد نفسه مضطراً للبيع القسري لتغطية الهامش، مشكلاً المزيد من الضغط على الأسواق في حال غياب أدوات التحوط المالية. قد يسبب البيع القسري لتغطية الهامش إرتفاعاً مؤقتاً في السيولة ولكن بطريقة غير صحيحة للأسوق.

منهم من إشترى أسهمه بأمواله الخاصة ولكن بأعلى الأسعار فوجَّ نفسه أسير خسائره مُكبَّل اليدين في غياب أدوات التحوط، فيحجم عن التداول وتسمعونه مرغماً يتكلّم عن الاستثمار طوبل الأمد وتوريث الأسهم لأولاده من بعده.

منهم من يتمتع بالسيولة لكنه يحجم عنولوج السوق بغياب أدوات التحوط ويفضّل عدم المخاطرة والإنتظار ليتأكد من الواقع قبل أيّ استثمار جديد.

في كافة هذه الحالات، بإستثناء البيع القسري، نرى بأنّ غياب أدوات التحوط يساهم بشكل كبير بتجفيف السيولة من الأسواق في فترة الإنخفاض. فهل يكون الحل هو فقط بإدراج أدوات التحوط من مشتقات وصناديق مبنية على المؤشرات؟

رابعاً: أهمية أدوات التحوط في رفع مستوى السيولة

يعتقد البعض أن التحوط يقتصر على إستعمال المشتقات متسائلين عن دور الصناديق المبنية على المؤشرات في التحوط.

في الأسواق المتطرفة، غالباً ما يعمد المستثمرون على المدى الطويل إلى الإعتماد على تقنية بيع الأسهم الإفرادية وإستبدالها بشراء الصناديق المبنية على المؤشرات خلال الأزمات المالية لكونها غير قابلة للإفلاس، كذلك للتخفيف من آثار التقلبات الحادة على محفظتهم إستناداً إلى مبدأ توزيع المخاطر التي توفرها المؤشرات بشكل عام.

أما السؤال الأهم والذي يطرح نفسه فهو السبب في التأخير بوضع المشتقات والصناديق المبنية على المؤشرات في تصرف المستثمرين في الأسواق العربية. لقد قامت جهات عدّة بإدراج أدوات مالية تُعتبر في بعض منها أدوات تساعد على التحوط من المخاطر، إلا أنها لم يكتب لها النجاح، إذ بقيت خجولة وذات سيولة منخفضة لدرجةٍ جعلت منها عبئاً على مصدريها وذلك

خامساً: البيع على المكشوف

يعد البعض التأخير بإعتماد البيع على المكشوف إلى سببين رئيسيين:

أسباباً دينية: هناك عمل دؤوب من قبل كافة المسؤولين الماليين والدينيين لإيجاد الحلول الملائمة والمشروعة لذلك. ونتوقع عبر مراقبتنا للجهود القائمة حالياً ظهور نتائج ملموسة في فترة لا تتعذر السنين في هذا المجال. فالمنطقة التي ولدت منها الصكوك الإسلامية لتصبح ركيزة من ركائز الأسواق المالية العربية، أصبحت على قاب قوسين من إعتماد الطرق السليمة والمطابقة للشريعة للبيع على المكشوف أو ما شابه حيث تكثر حالياً الدراسات والإتجاهات في هذا المجال.

أسباباً رقابية: تتخلّف الجهات الرقابية بمعظمها من أنّ إعتماد البيع على المكشوف قد يزيد من حدة الإنخفاض في الأسواق خلال الأزمات المالية. في هذا الرأي بعض من الصحة لو لم نأخذ في الحسبان إيجابيات البيع على المكشوف والتي قد تطغى وبشكل كبير على سلبياته.

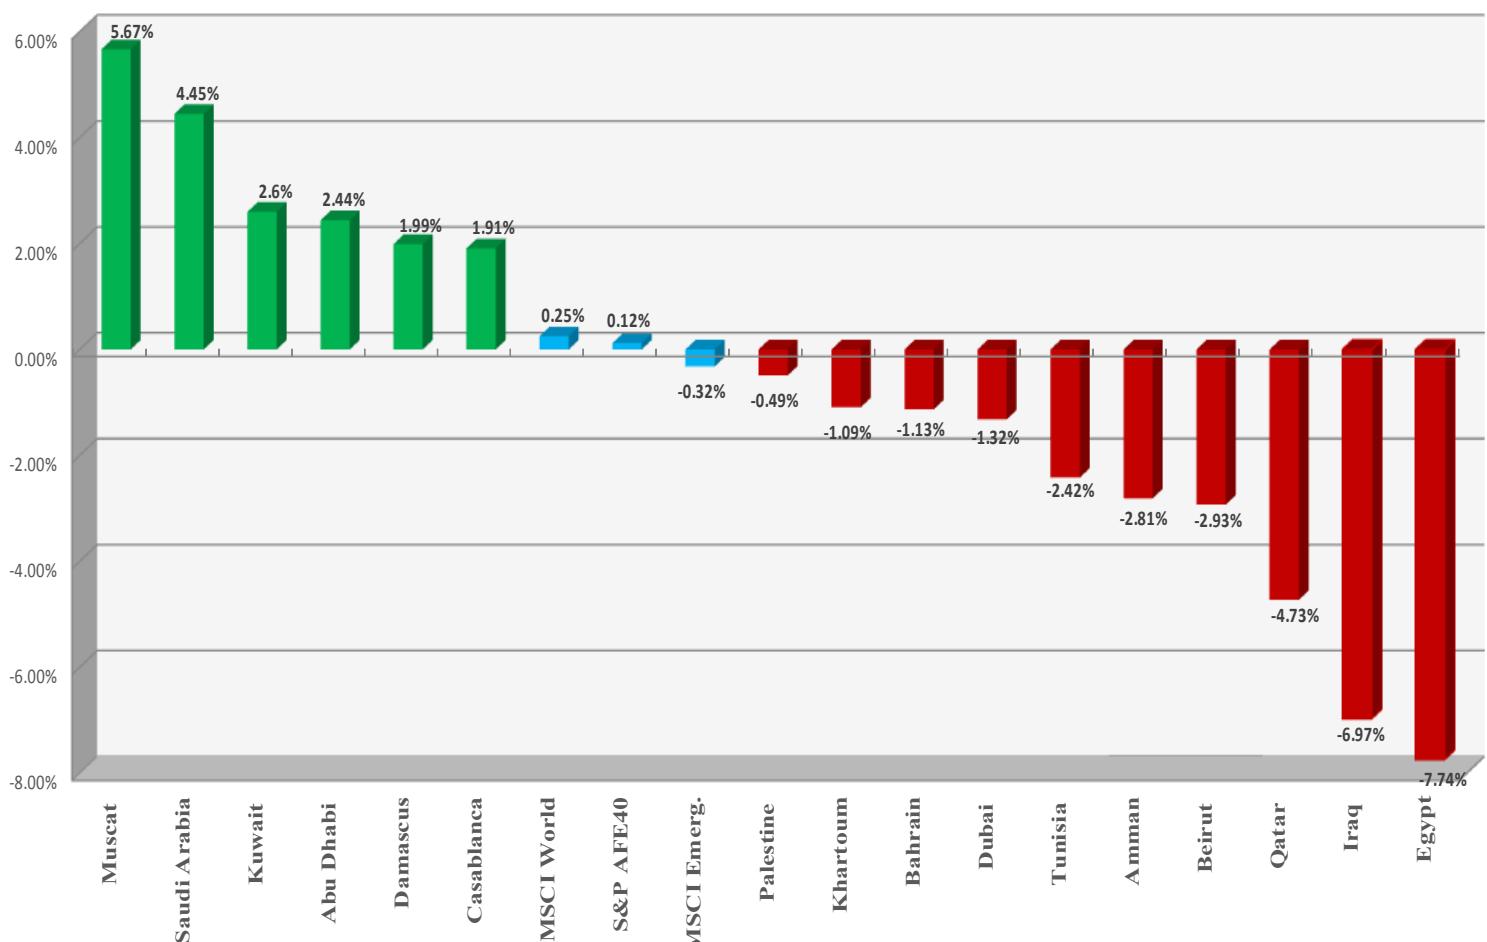

صحيح أنّ البيع على المكشوف قد يدفع بالأسواق مرحلياً إلى المغالات في الهبوط ولكن هذا البيع يعطيه الزخم المطلوب للحركة الإرتدادية التصاعدية بحسب الشكل ٧ بسبب عامل التغطية للمرآكز المكشوفة. ولكن في المقابل، تُساهم أدوات التحوّط في حال وُجدت في التخفيف من آثار البيع الإلزامي للمشتريات على الهامش.

سادساً: هل نحmi فعلاً أسواقنا بمنع البيع على المكشوف؟

قد يطول الجدل حول إيجابيات وسلبيات البيع على المكشوف وتبقى الآثار المتوقعة منه إفتراضية لولا إعتماد المقارنة بين الأسواق العالمية وأسواقنا العربية. أن مجرد المقارنة بين الرسوم البيانية للأسواق العالمية التي تعتمد المشتقات والبيع على المكشوف وأسواقنا العربية التي تققر إلى هاتين الآليتين تظهر بوضوح بأننا لم نستطع حماية أسواقنا بمنع البيع على المكشوف عنها وبحرمانها من آليات التحوّط، لا بل وبالعكس فإن الأسواق العالمية والأمريكية خاصة أظهرت تماساًًاً فاق ما رأيناً على أسواقنا، رغم الأزمات الحادة التي ضربتها والتي لم نكن يوماً بمنأى عنها.

مع الأمل الكبير بأن المرحلة الأسوأ من إنخفاض أسعار النفط وتأثيراتها على السيولة في الأسواق العربية قد أصبحت وراءنا.
